	Nickel Rotary Brush

RECYCLED PLASTIC

	Cherry		Green
	White		Brown
	Black		Gray
	Weathered		Cedar

HARDWOOD

	Ipe
	Garapa
	Lamboo®

Material Options

HDPE Recycled Plastic

High-Density Polyethylene recycled plastic is most often selected due to its extreme durability in challenging environments. Whether being used outdoors in nature's harshest elements or indoors in tough commercial settings, HDPE recycled plastic offers many distinctive features beyond being an Eco-friendly product. Offered in eight standard fade resistant color choices, HDPE recycled plastic can be coordinated to compliment almost any indoor or outdoor setting. Impervious to rotting, splitting, mold, rust and insects, HDPE recycled plastic requires no waterproofing, staining, painting or similar maintenance associated with common products like wood or metal.

Ipe Hardwood

Ipe wood is known by many names: Ipe Brazil, Amapa, Cortex, Guayacan, Flor Amarillo, Greenheart, Madera Negra, Tahuari, Lapacho Negro. It also has a number of trade names, including Ironwood™, Pau Lope™ and Brazilian Walnut – commercial names given to Ipe lumber by large Brazilian exporters. All ipe products manufactured by R3 Site Furnishings are harvested from sustainable forests and Lacey Act-compliant. The U.S. Department of Agriculture and Forestry describes ipe as “very resistant to attack by decay, fungi and termites.” Although it's similar to garapa in terms of its strength and durability, ipe wood is much denser and therefore extremely resistant to preservation treatments. Left to nature, the color of your outdoor ipe furnishings will gradually change to a nice, consistent light gray. If you choose, power washing will restore its original appearance even after the gray color appears. Otherwise, periodically applying a protective finish will help your ipe resist weathering and retain its original color.

Garapa Hardwood

Garapa wood, also known as Brazilian Ash, is a dense and naturally durable Brazilian timber. Its golden color, fine grain and moderate cost make it an attractive alternate to more expensive hardwoods such as Teak or Ipe for furnishings and outdoor furniture. The light color also makes it attractive for environments that have heavy sun exposure as it will not become overly hot to the touch. Periodic maintenance is all that's required to keep your garapa site furnishings looking like new. Left untreated, the wood will develop a silver/gray patina.

Lamboo®

Lamboo® is an engineered high-performance bamboo product sourced from sustainably managed plantations. Structurally superior to its wood counterparts, Lamboo® can be manufactured in both interior and exterior grades and comes in a variety of aesthetically pleasing grain patterns. The use of Lamboo® products qualifies for up to 4 LEED® credits. Lamboo® furnishings require periodic maintenance.

Designer Panels™

Designer Panels™ are offered for those who prefer the low maintenance of a plastic but prefer a more modern aesthetic look. Designer Panels™ are manufactured from UV stable HDPE and are lead and heavy metal free, allowing them to optimize performance while being environmentally friendly. The panels will not delaminate, chip, rot, rust or require painting, meaning the units are virtually maintenance free.

Logo Options

Cast Metal logos are a premium choice for 3D logo replication. Modeled logos involve either hand sculpting or CNC routing an image. The modeled logo is then hand-finished. Available on cast bronze or cast aluminum products.

Dendron™ Medallion is a revolutionary material made by combining the latest technology in graphic printing with recycled content through extreme heat and pressure. The finished product provides unmatched quality graphics that are able to sustain any environment's harshest conditions. Dendron™ is the golf industry's only outdoor graphic material backed by a 10 year warranty, making it a perfect economical solution for signage, markers and course furnishings.

Etched Medallion is used for extremely detailed logos. Available on bronze, aluminum, copper, stainless steel and zinc metals.

Waterjet Cut is an elegant option, adding a touch of class to your item. Waterjet cut logos and letters can be flat mounted or mounted with "standoffs" to give a dimensional look. Available in metal or acrylic.

Engraved Wood when used for detailed logos will give you outstanding results on hardwoods.

Routed and Infilled logos are routed, etched or sandblasted and then infilled with a colored resin or paint.

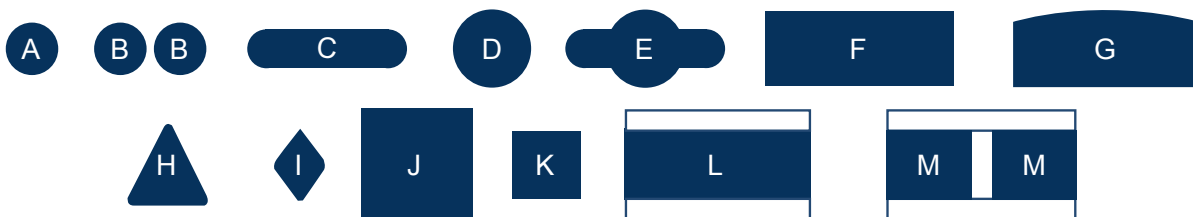

Cold Cast logos, can be made by hand or machined, and offer an alternative to cast metal logos. A variety of finishes are available.

Digitally Printed logos provide unlimited colors and detail. Logos can be printed onto laminated vinyl which can be attached to a wide variety of substrates, or your logo can be directly printed onto acrylic or polycarbonate substrate.

Please contact a sales consultant for assistance determining which logo style best fits your need.

Restrictive Openings

Restrictive Opening Dimensions

	Dimensions	Common Use		Dimensions	Common Use
A	4" Circle	Cans	H	6" x 8" Triangle	Waste/Compost
